                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 60, Application US/09404879A
Patent No. 6468546
GENERAL INFORMATION:
APPLICANT: Mitcham, Jennifer L.
APPLICANT: King, Gordon E.
APPLICANT: King, Gordon E.
APPLICANT: Algate, Paul A.
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR
TITLE OF INVENTION: DIAGNOSIS OF OVARIAN CANCER
FILE REFERENCE: 210121.46202
                                                                                                                                                                                                                                                                                     Sequence 60, Application US/09338933
Patent No. 6488931
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches 247;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

```
The present sequence represents mouse Esel. The present invention CC specifically describes mammalian Esel and 2 proteins (I) and their splice CC variants (Ese = EH-domain and SH3-domain regulator of endocytosis). (I) CC are involved in regulation of clathrin-mediated endocytosis (as a complex CC with Espl5 protein), vesicular trafficking and actin cytoskeleton. CC Generally (I) (or its (ant)agonists, mimetics, fragments and inactive mutants); (I)-specific antibodies (Ab); sequences antisense to the (I) CC polynucleotide, agents that downregulate expression of Ese genes or CC antagonists of an Ese binding partner are used to treat diseases CC associated with undesirable endocytosis and resulting changes in cellular function. Particularly overexpression of Esel is used to block CC clathrin-mediated endocytosis in vivo or in cell cultures, while CC clathrin-mediated endocytosis in vivo or in cell cultures, while CC clathrin-mediated endocytosis in vivo or in cell cultures while CC clathrin-mediated to proliferate by a growth factor receptor; CC and similar compounds (also inactive Ese mutants) can be used to prevent CC viral infection. Endocytosis may also be regulated, in vivo or in cell C cultures, by forming an Ese-Espl5 complex, then binding dynamin to the CC complex. Generally conditions that can be treated include cancer; CC abnormal cell division or migration; viral infection; or abnormal CC complex. Generally conditions that can be treated include cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              IWALADMUNDGRMDQVEFSIAMKLIKLKLQGYQLPSTLPPVMKQQPVAISSAPAFGIGGI 120

Generally (I) (or its (ant)agonists, mimetics, fragments and inactive mutants); (I) specific antibodies (Ab); sequences antisense to the (I) polynucleotide; agents that downregulate expression of Ese genes or antagonists of an Ese binding partner are used to treat diseases associated with undesirable endocytosis and resulting changes in cellular function. Particularly overexpression of Esel is used to block clathrin-mediated endocytosis in vivo or in cell cultures, while administration of (I) is used to suppress abnormal proliferation of cells that can be stimulated to promote endocytosis of selected cells. (Ant)agonists of (I) or Ab are used to suppress abnormal proliferation of cells that can be stimulated to proliferate by a growth factor receptor; and similar compounds (also inactive Ese mutants) can be used to prevent viral infection. Endocytosis may also be regulated, in vivo or in cell cultures, by forming an Ese-Esp15 complex, then binding dynamin to the complex. Generally conditions that can be treated include cancer; abnormal cell division or migration; viral infection; or abnormal receptor signalling, tissue development or synaptic transmission. The

                                                                                                                                                                                                             ક
                                                                                                                                                                                                                                        В
                                                                                                                                                                                                                                                          8
                                                                                                                                                                                                                                                                                                                                        gene maps to the small candidate region for low platelets on chromosome 21. The protein includes SH3 domains and EH domains, both associated with protein-protein interactions and the latter with maintenance of the cytoskeleton. At least 3 isoforms of SH3DlA exist (see AAY32154-58). The invention provides methods for the diagnosis and treatment of megakaryocytic abnormality, myeloproliferative disorder, platelet disorder, acute leukaemia, meural disorders, thromobocytopenia, platelet disorder on chromosome 21, low platelets in deletion for 21, association of gains in chromosome 21 with leukaemias, neural abnormalities, dysfunctions and disorders including brain malformations and colpocephaly. Methods are also provided: for suppressing cells unable to regulate themselves; screening for a somatic alteration in the SH3DlA gene; monitoring the progress and adequacy of a treatment; monitoring tumor risk progress or

                                                                                                                                         밁
                                                                                                                                                                                                      8
                                                                                                                                                                                                                                 δ
                                                                                                                                                                                                                                                                                                                                                                      both associated with protein interactions and the latter with maintenance of the cytoskeleton. At least 3 isoforms of SH3DIA exist (see AN32154-58). The inventions provides methods for the diagnosis and treatment of megakaryocytic abnormality. The diagnosis and treatment of megakaryocytic abnormality myeloproliferative disorder, platelet disorder, acute leukaemia, neural disorders, thromobocytopenia, platelet disorder on chromosome 21, low platelets in deletion for 21, association of gains in chromosome 21 with leukaemias, neural abnormalities, dysfunctions and disorders including brain malformations and corresponding cognitive dysfunctions, microcephaly, lissencephaly, and colpocephaly. Methods are also provided: for suppressing cells unable to regulate themselves, screening for a somatic alteration in the SH3DIA gene; monitoring thmour risk progress or megakaryoctyic abnormality, myeloproliferative disorder, and haematopoietic disorder, platelet disorder or leukaemia; and
                                                                                                                                                                                                                                                                  Query Match

SH3DLA contributes to the develof platelets and the pathogenesis of leukaemias, both in gener and in particular those involving the megakaryocytic lineage and in particular those involving the megakaryocytic lineage gene maps to the small candidate region for low platelets on thromosome 21. The protein includes SH3 domains and EH domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             platelet disorder; neural disorder; thromobocytopenia;

This sequence represents the protein encoded by the novel human Standard gene (see AAZ34570). SHADIA contributes to the development of platelets and the pathogenesis of leukaemias, both in general and in particular those involving the megakaryocytic lineage. The gene maps to the small candidate region for low platelets on thromosome 21. The protein includes SH3 domains and EH domains, both maintenance of the cytoskeleton. At least 3 isoforms of with maintenance of the cytoskeleton. At least 3 isoforms of SH3DIA exist (see AAY32154-58). The invention provides methods for the diagnosis and treatment of megakaryocytic abnormality, myeloproliferative disorder, platelet disorder, acute leukaemia, chromosome 21, low platelets in deletion for 21, association of cysfunctions and disorders including brain malformations and corresponding cognitive dysfunctions, microcephaly, lissencephaly, and colpocephaly. Methods are also provided: for suppressing cells unable to regulate themselves; screening for a somatic aleguacy of a treatment; monitoring tumour risk progress or megakaryocytic abnormality, myeloproliferative disorder, and copietic disorder, platelet disorder or leukaemia; and corresponderic disorder, platelet disorder or leukaemia; and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SH3DlA; human; Down's syndrome; leukaemia; cancer; megakaryocytic abnormality; myeloproliferative disorder; platelet disorder; neural disorder; thromobocytopenia; haematopoietic disorder; cognitive dysfunction; microcephaly; lissencephaly; colpocephaly; holoprosencephaly; diagnosis; therapy.

                                                                                                                                                                                                                                                                           novel central nervous system protein. (I) and polypeptides (II) encoding a novel central nervous system protein. (I) and polypeptides (III) encoded by (I) are used to treat a medical conditions and in diagnosis of a pathological condition. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. nepplasms of the breast or liver, cardiovascular disorders e.g. nepplasms of the breast or liver, cardiovascular disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          08-NOV-2000;
17-NOV-2000;
            leukaemia, disorders involving neovascularisation e.g. mailgnancies, respiratory disorders e.g. monallergic rhintis, renal disorders e.g. acute kidney failure and blood related disorders e.g. myocardial infarction. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sumburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to
                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated nucleic acid encoding a protein preventing, treating or ameliorating medical food additives or preservatives -

                                                                                                                                                                                                                                                  S
                                                                                                                                                                                                                                                                                                                                             or ameliorating medical conditions e.g. by protein or gene therapy. The genes were isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, ce .g. breest and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or crogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, ce conitis, (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological disease e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as myocardial ischaemias; ce pilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly cfrom WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC polynucleotides are also used in diagnostics as expressed sequence tags continued to the continued of (II) is useful in gene therapy techniques (II). (II) is useful for generating antibodies against it, detecting or cylindrating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical cimaging of sites expressing (II). (I) and (II) are useful for treating continued in view expression or biological activity. (If the polypeptide and polynucleotide sequences have applications in conditions for ensured disorders or other traits to assess biodiversity cand to produce other types of data and products dependent on DNA and conditions of single sequences and sequences of the invention.

CC and to produce other types of data and products dependent on DNA and conditions of amino acid sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed as pecification, but was obtained in electronic format directly from WIPO as ferming and products of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S
                                                                                                                                         The present invention relates to a method for examining allergic diseases with intersectin 2 gene or a gene with equivalent function of intersectin 2 as an indicator gene, which comprises determining the expression level of the gene in the eosinophils in a patient, and comparing the expression level with that in the eosinophils of a healthy individual. The method is for examining allergic diseases, particularly atopic dermatitis, which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sugita Y,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                          This sequence represents the protein encoded by the human SH3DIA CC cDNA clone 5 (see AAZ34573). SH3DIA contributes to the development CC of platelets and the pathogenesis of leukaemias, both in general cand in particular those involving the megakaryocytic lineage. The gene maps to the small candidate region for low platelets on CC chromosome 21. The protein includes SH3 domains and EH domains, CC both associated with protein-protein interactions and the latter CC with maintenance of the cytoskeleton. At least 3 isoforms of CC sH3DIA exist (see AAY32154-58). The invention provides methods for the diagnosis and treatment of megakaryocytic abnormality, cc myeloproliferative disorder, platelet disorder, acute leukaemia, CC neural disorders, thromobocytopenia, platelet disorder on CC chromosome 21, low platelets in deletion for 21, association of CC gains in chromosome 21 with leukaemias, neural abnormalities, CC dysfunctions and disorders including brain malformations and corresponding cognitive dysfunctions, malcrocephaly, liseencephaly, CC and colpocephaly. Methods are also provided: for suppressing CC cells unable to regulate themselves; screening for a somatic cells unable to regulate themselves; screening for a somatic caleguacy of a treatment; monitoring thmour risk progress or megakaryoctyic abnormality, myeloproliferative disorder, platelet disorder or leukaemia; and corrected of the corre
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SH3DlA; human; Down's syndrome; leukaemia; cancer; megakaryocytic abnormality; myeloproliferative disorder; platelet disorder; neural disorder; thromobocytopenia; haematopoietic disorder; cognitive dysfunction; microcephal lissencephaly; colpocephaly; holoprosencephaly; diagnosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human SH3D1A

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haemcopoissis regulating activity, tissue growth factor activity, hamunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and
                                                                                                                                                                                                                                                                                                                                                                                                                               Note: Records for SEQ ID NO 2110 (AAK52581), (AAM80020) are omitted as the relevant pages were missing at the time of publication.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nucleic acids encoding polypeptides with useful in diagnosis and gene therapy -

CC with Esp15 protein), vesicular trafficking and actin cytoskeleton.

CC denerally (I) (or its (ant)agonists, minetics, fragments and inactive mutants); (I) specific antibodies (Ab); sequences antisense to the (I) polynucleotide; agents that downregulate expression of Ese genes or CC antagonists of an Ese binding partner are used to treat diseases CC associated with undesirable endocytosis and resulting changes in cellular function. Particularly overexpression of Ese 1 is used to block CC clathrin-mediated endocytosis in vivo or in cell cultures, while CC cantistion of (I) is used to promote endocytosis of selected cells. CC (Ant)agonists of (I) or Ab are used to suppress abnormal proliferation of CC cells that can be stimulated to proliferate by a growth factor receptor; CC and similar compounds (also inactive Ese mutants) can be used to prevent CC viral infection. Endocytosis may also be regulated, in vivo or in cell CC complex. Generally conditions that can be treated include cancer; CC complex. Generally conditions that can be treated include cancer; CC abnormal cell division or migration; viral infection; or abnormal compounds.
                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents mouse Ese2. The present invention specifically describes mammalian Ese1 and 2 proteins (I) and their splice variants (Ese = EH-domain and SH3-domain regulator of endocytosis). (I) are involved in regulation of clathrin-mediated endocytosis (as a complex
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   regulation; actin cytoskeleton; detection; cancer; infection; EH-domain and SH3-domain regulator of endocytosis; anticancer; antiproliferative; antiviral.

```
CC The present invention specifically describes mammalian Esel and 2 CC proteins (I) and their splice variants (Ese = EH-domain and SH3-domain CC regulator of endocytosis). (I) are involved in regulation of clathrin-CC mediated endocytosis (as a complex with Espl5 protein), vesicular CC trafficking and actin cytoskeleton. Generally (I) (or its (ant)agonists CC mimetics, fragments and inactive mutants); (I)-specific antibodies (Ab); CC sequences antisense to the (I) polynucleotide; agents that downregulate CC used to treat diseases associated with undesirable endocytosis and CC resulting changes in cellular function. Particularly overexpression of Esel is used to block clathrin-mediated endocytosis in vivo or in cell CC cultures, while administration of (I) is used to promote endocytosis of CC selected cells. (Ant)agonists of (I) or Ab are used to suppress abnormal CC proliferation of cells that can be stimulated to proliferate by a growth CC cused to prevent viral infection. Endocytosis may also be regulated, in CC vivo or in cell cultures, by forming an Ese-Espl5 complex, then binding CC cancer; abnormal cell division or migration; viral infection, or abnormal CC receptor signalling, tissue development or synaptic transmission. The CC present sequence represents mouse Ese2I protein sequence.
                                                                                  Query Match
